

reMARK + Veson

VIP to reMARK integration introduces a server controller that automates the creation of new vessel and voyage folders, so incoming emails can be filed automatically without the need for an admin user to create these manually. For this point, we use data provided by VIP.

Benefits of this Integration

Drive daily work processes with business data from IMOS

Sort and organize communications

Streamline folders

Have the right context when working on all emails

Simplify workflows

How it Works

VIP sync controller creates Smart Folders in reMARK in the following manner:

✓  Vessel Name [1]

 First voyage
 Second voyage
 ...
 N-th voyage

✓  Vessel Name [2]

 620001
 620002
 ...
 620NNN

✓  Vessel Name [3]

 CAAD012
 CAAD013
 ...
 CAADNNN

- Vessel folders include automatic filing with criteria: Subject or Message contains vessel name
- Voyage folder includes automatic filing with criteria: Subject or Message contains vessel name and voyage number
- For each voyage, it also creates a folder for the next expected voyage number. Next expected voyage number = voyage number + 1

Our team at Nordic IT values our partnership with Veson and we welcome requests and suggestions for additional features in our integration. To learn more about this partnership or request a feature, contact our team!
